Summary

Flexible and dedicated Software Engineer with over two years of hands-on experience in developing reliable applications using Javascript, Typescript, Reactjs, Nextjs, React Native among other tools. Proficient in both mobile and web development, I bring a proven track record of delivering high-quality solutions that meet client expectations. My expertise extends to navigating diverse time zones seamlessly, having successfully collaborated with teams across various regions

Experience

Wardbord — **Febuary 2023 – present**
Senior Frontend developer/Mobile app developer — Texas, USA
🔗 https://wardbord.com/

- Developed a web app using **React.js** and **Redux** that enables coaches to grade, view, edit, and invite players to their team. Utilized **Ant Design** (Antd) for UI components and integrated RESTful APIs for seamless communication with the backend.
- Collaborated with cross-functional teams including other **React Native** developers, UI/UX designers, QA engineers, and project managers to develop a mobile app for players to view grades, leveraging **React Native** for a smooth cross-platform experience.
- Optimized front-end performance by eliminating bottlenecks through code splitting, lazy loading, and optimizing component re-renders with **React Query**, significantly reducing load times and improving user experience.
- Focused on code reusability and scalability by creating modular front-end components with **React hooks** and **CSS-in-JS library**, ensuring maintainability and enhancing development efficiency.
- Adopted **agile methodologies** (Scrum) to collaborate effectively with the team, participate in code reviews, and contribute to sprint planning and retrospective sessions.
- Assisted with deployment processes using **CI/CD tools** (**GitHub & Gitlab**) to automate deployment workflows, ensuring smooth transitions from development to production.
- Integrated state management tools like **Redux, React Query** and **Context API** for better scalability and maintainability across the application.

Innovacao — **January 2024 – March 2024**
Frontend Engineer — Lagos, Nigeria.
🔗 https://streetfoodtest.inovacaong.com/

- Led frontend development for two key company applications, **Street Food** and **Gold Privilege**, using **Next.js** and **Typescript** while collaborating effectively with other frontend developers to ensure high-quality deliverables.
- Implemented payment integration with **Paystack**, utilizing **JavaScript** and **REST APIs** to provide users with a seamless transaction experience and enhance overall customer satisfaction.
- Managed development and cloud architecture for both applications, ensuring robust performance, scalability, and security in the deployment of features.
- Conducted code reviews for junior developers, fostering a culture of learning and improvement while maintaining high code quality and best practices in **JavaScript** and **CSS**.
- Collaborated with engineers and designers to make informed design decisions for the products, ensuring alignment with user experience and business goals through tools like **Figma**.
- Integrated Google Maps functionality into one of the applications using the **Google Maps API**, enhancing user engagement and providing valuable location-based services.

Vatebra ltd — **January 2022 – August 2022**
Frontend developer — Lagos, Nigeria
🔗 https://vatebra.com/

- Collaborated with engineers to develop SaaS applications using **Agile methodology**, contributing to iterative development and regular feedback cycles to enhance project outcomes.
- Assisted in writing views for **.NET MVC applications**, ensuring adherence to clean architecture principles and best practices for maintainability.
- Contributed to key features such as **role management, performance management**, and **task tracking systems**, gaining hands-on experience in feature development and implementation.
- Worked alongside a team of interns to design and build a **Memo and Approval system** using **JavaScript** and **React.js**, enhancing collaboration and communication within the organization.
- Implemented user-centric designs to develop intuitive applications, focusing on enhancing user experience and accessibility.
- Maintained existing applications and provided ongoing support for users, troubleshooting issues and facilitating a smooth user experience.

MergeIt Tech — **July 2021– December 2021**
Frontend developer Intern — Kwara State, Nigeria

- Developed applications through coding and programming, actively contributing to the creation of high-quality software solutions.
- Debugged and tested code to ensure functionality and performance, identifying and resolving issues to enhance application reliability.
- Documented and tested new software applications, creating clear and concise documentation to facilitate understanding and future development.
- Researched and investigated a wide range of technical issues, applying problem-solving skills to troubleshoot and resolve challenges effectively.
- Collaborated with senior developers on various projects, gaining valuable insights into best practices and software development methodologies.

Education

University of Ilorin — **October 2015 – October 2021**
Food Science — BSc
🔗 https://undergraduate.portal.unilorin.edu.ng/index.php

Projects

Wardbord — **February 2023 – present**
"Wardbord" is a game-changing tool for coaches, bringing a new level of organization and productivity to their work. By replacing scattered notepads and spreadsheets with a streamlined, digital system.
🔗 https://wardbord.com/

- Wardbord eliminates clutter and reduces administrative overhead.
- Replaces disorganized notepads and spreadsheets with a streamlined system Creates an effective workflow that prioritizes and enhances coaches' tasks
- Automates the generation of analytics directly from the coaches' work

Wardbord Player App — **June 2023 – present**
"Wardbord Player App provides players with unparalleled access to their performance data and coach feedback. Through this innovative application, players can effortlessly view their grades and insightful feedback from coaches, empowering them to track their progress and make informed decisions to enhance their skills.

App Store : https://apps.apple.com/us/app/wardbord/id1619683329
Google Play : https://play.google.com/store/apps/details?id=com.wardbord.playerapp&pli=1

MoneyHq
A Software App that integrate AI to generate Financial Statetements
🔗 https://app.moneyhq.io

Examinator
This comprehensive platform empowers lecturers to effortlessly create and administer assessments for their students. Notably, it allows students to take exams online, ensuring a flexible and efficient process. The application employs advanced algorithms for prompt result generation.
